

HabiTEQ™

Flexible home automation
for energy efficiency, safety
and comfort

GE imagination at work

In the rhythm of your family

Convenience at your fingertips

3 Leaving for work... and in a rush!

Activate the leaving home scene. Your security systems are activated. You get an alarm if you have left any access doors or windows open. The heating switches to economy mode, thus saving energy. All pre-selected power points are turned off. The lighting in the house is turned down. All this with just a touch of the button!

2 Order coffee from bed

Pick up your remote from your bed. Turn on the lights in your kitchen and the coffee machine to brew that perfect cup.

In the morning

Synchronised with your alarm, your house awakens you gently. Lights turn on to preset brightness and the shutters unwind to let just enough light to suit your comfort. The towel warmer goes on and the temperature level is adjusted to your morning activity.

4

During the day

Want to check on your home? Or control it while you are out shopping or at work? Send an SMS or get on the internet. Check your security system status anytime, anywhere. Activate or deactivate tasks: the shutters, pool filter or the garden sprinkler.

5

Returning home

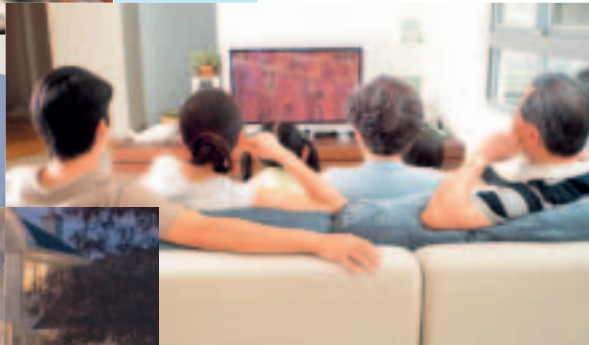

Relax for a while after a stressful day at work. Hit the relax mode on your remote. Control the ambience to suit your mood, with just the right amount of light and some relaxing music.

6

Enjoy the evening

Planning a party and dinner with friends or a movie night? Create the perfect ambience for each scenario using your stylish touch screen. Pre-programmed scenarios suit your lifestyle in terms of light, climate and curtains.

Control lights, shutters, climate, volume or send an SMS ...and much more!!

With just the push of a button!

7

Time for bed

Simply press your 'goodnight button' on your remote or the switch next to your bed. All lights will fade to off. Your security system is activated. All shutters go to their predefined night positions. You can sleep like a baby while the house watches over you.

Energy efficiency, safety and comfort

Energy saving is also common sense!

Energy efficiency

Quality time

Gently getting up in the morning, enjoying a quiet evening after a stressful day or having dinner with friends? With only one flick of a button, your house adjusts to your every need. Creating the right atmosphere for your current mood.

Economy and ecology

An intelligent, event-based climate control system regulates the efficient use of energy. When you leave the house or go to bed, the heating switches to economy mode. All preselected power points are turned off. The lighting in the house is turned down. And when you re-enter or get up, everything will be waiting for you. Just as you want it to be.

Saving energy

- Light dependent lamp brightness control
- Event-based climate control
- Presence-based lighting, with preset brightness levels
- Load shifting (e.g. washing) to off-peak times
- Visualize energy usage and control consumption

ecomaginationSM

GE's company-wide commitment to help customers and consumers meet environmental challenges

Total peace of mind

Leave your house in a hurry or go to bed without worrying if everything is safe. With one push of a button, you activate your security systems. Warning you if you have left any access doors or windows open, when it detects smoke or if there's an intrusion.

Returning home scenario

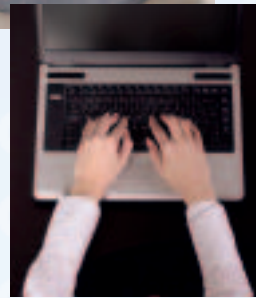

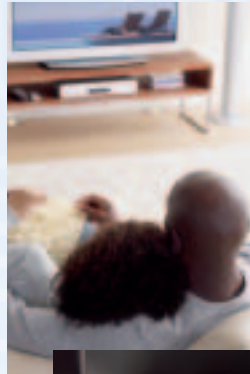

Send an SMS or push the button at the entrance. Light up your home and the pathway in time for your arrival. Get the climate control started so you can enjoy just the right temperature and quality of air when you step in.

Getting up during the night

Need to get up during the night? Hit the button to turn on lights dimmed to half brightness so you don't disturb the rest of the household. Perfect for getting ready to catch the early morning flight or for feeding the baby.

Safety

Comfort

Safety

- Motion/presence-controlled lighting for night time
- Alarms on your mobile for intrusion or presence
